

# STOP illegal goods and chemicals

► X-ray inspection ► Chemical identification ► Decision support

**Stop illegal goods and chemicals by maximising the value of portable X-Ray, on the spot chemical identification and ChemDash Software for easy analysis and reporting.**

The data collected at the scene is often only a part of a bigger puzzle. Passing data onward for others to analyse is often necessary to make proper decisions in dangerous situations. Additional benefits can be realised since screening data will be available in ChemDash as part of the workflow.

The package is examined by X-ray screening. If non-permissible items are found the package shall be detained. X-Ray images are uploaded to ChemDash.

1

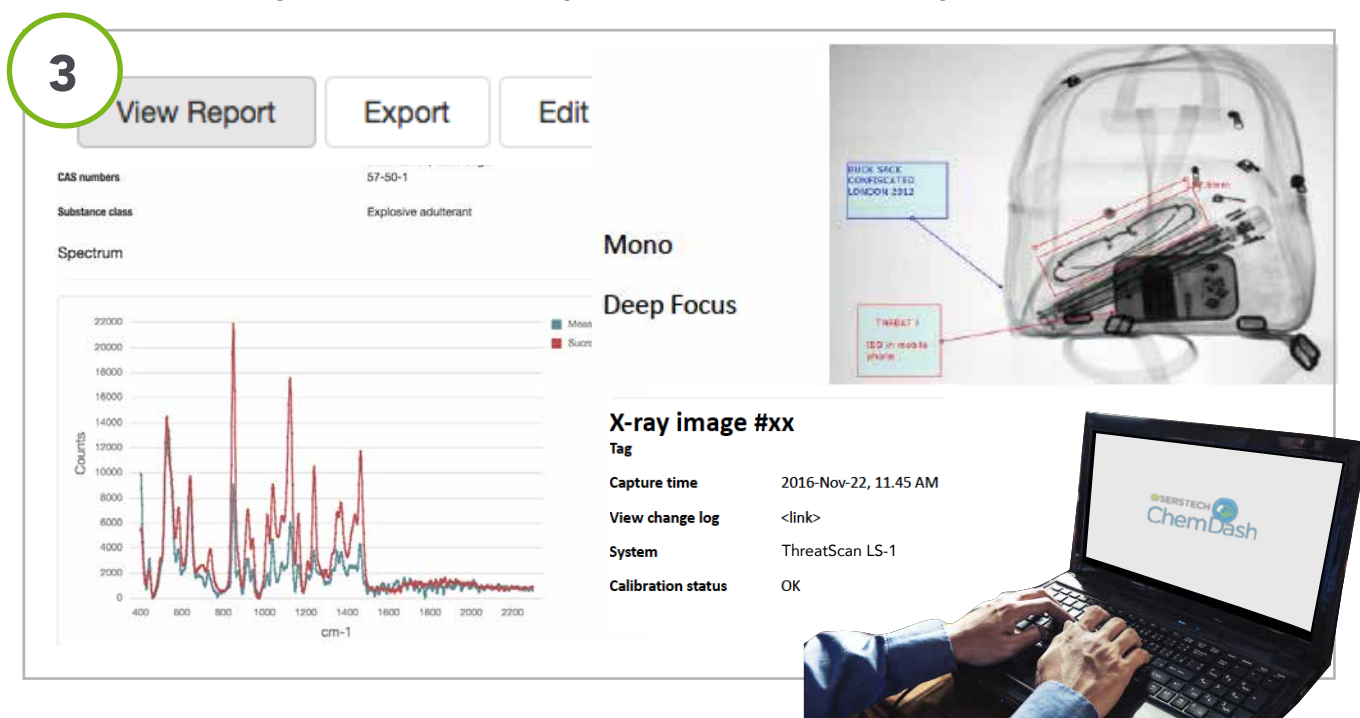

If suspect items (solids, liquids, powders) are found they are screened using Raman spectroscopy. In the case of explosive materials, the facility's bomb threat procedures are put into effect. Measurement data is stored in ChemDash for later reference.

2

Accumulated images, spectra and associated data is stored in ChemDash. From there, you can create reports which can be shared within the organisation for further investigation and evidence. It is possible to add additional information after the fact (such as notes). The reported can also be exported and sent to external parties as needed.

Measurement data, pictures and reports from ChemDash will make it easy to assemble materials for investigative and forensic purposes. It is designed to get you valuable support for your decisions and actions, wherever you are.
